The following are Factory Rates for the coming season, and bills unpaid by the 20th prox. will be drawn for at sight.

Please examine List *Carefully* before ordering, as various *Changes* and *Additions* have been made.

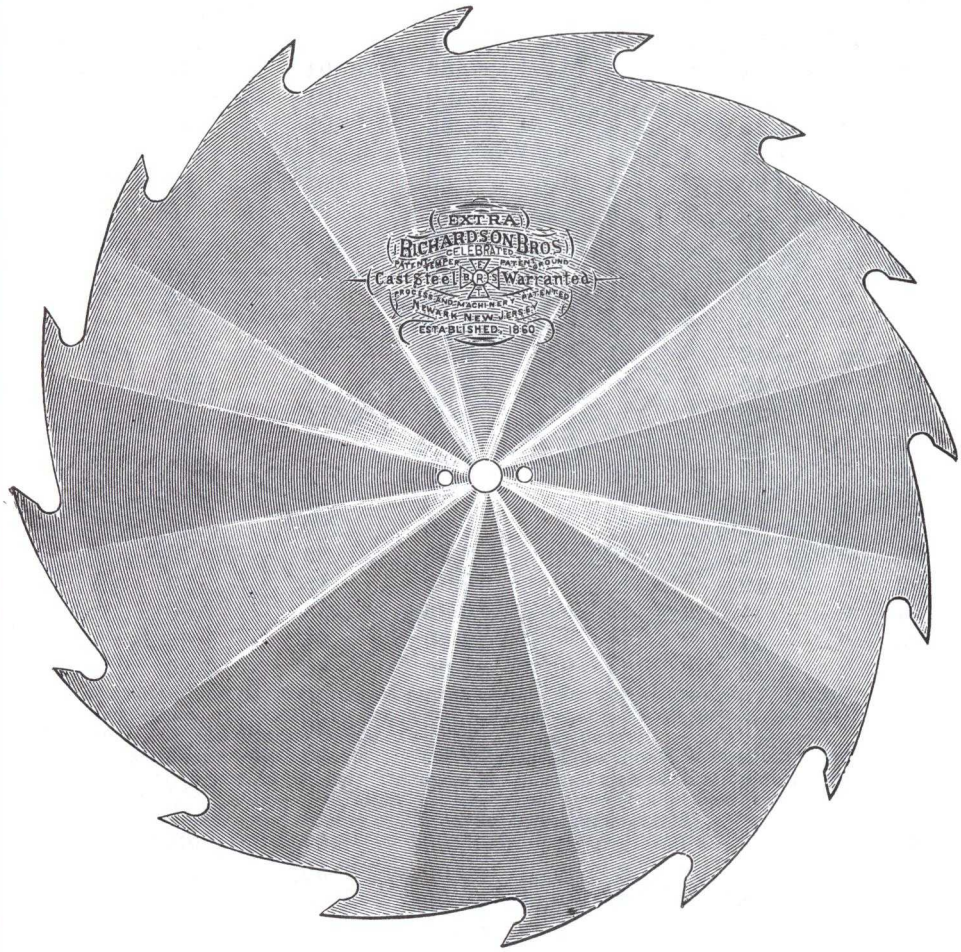
Packages charged for.

Goods delivered Free on Board in New York City.

Saws not on our List made to order at short notice.

## Richardsons' Celebrated Patent Oil Tempered and Patent Ground

# CIRCULAR SAWS.



## TERMS OF WARRANTY.

Each Saw is warranted perfectly true, or as true as it is possible to make it, free from flaws and seams. If found to be defective in either of these particulars it may be returned, and if on examination we are satisfied the Saw is at fault, all necessary repairs will be made free of charge, or a new Saw will be given in exchange, provided it is returned within sixty days from delivery.

The practice of using a cold-chisel or punch for re-toothing a Saw is almost certain to distort or crack the plate, and **corners filed square in the gullet of the tooth will frequently produce the same result**, particularly in frosty weather. Our warranty does not cover Saws breaking from either of these Causes.

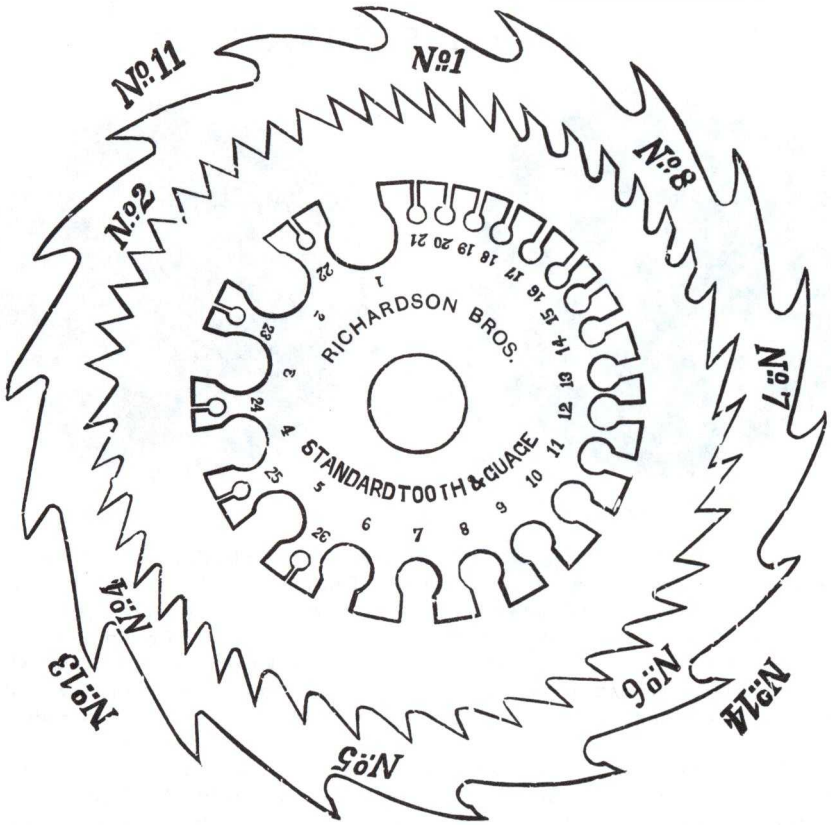
No extra charge for Saws one gauge thinner than list. One gauge Beveling allowed on all Circular Saws larger than 38 inches. All Circular Saws 48 inches and larger if thinner than 10 gauge are not warranted, and add 10 per cent. for each gauge thinner than No. 10.



The above illustration represents our various styles and sizes of Saw Teeth; also our Standard Gauge. By consulting it a person will be enabled to inform us of the Size and Style of Tooth, and also the Gauge of any Saw he may desire.

When ordering Circular Saws the following directions should be explicitly given:

Diameter of Saw, in inches. Thickness or Gauge of Saw at Rim. Thickness or Gauge of Saw at Centre. Log side, right or left hand, saw cutting towards you. Number of Teeth in Saw. Kind and number of Tooth, as shown on engraving. Size of mandrel hole. Size of pin holes. Distance between pin holes from centre to centre.

## OUR STANDARD GAUGE

### Exactly Corresponds with the Stubbs' English Gauge.

| Gauge. | Decimals of one inch. | Gauge. | Decimals of one inch. |
|---|---|---|---|
| 0 | .340 | 13 | .095 |
| 1 | .300 | 14 | .083 |
| 2 | .284 | 15 | .072 |
| 3 | .259 | 16 | .065 |
| 4 | .238 | 17 | .058 |

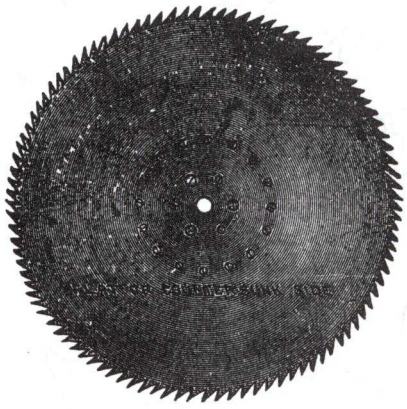
| 9 | .148 | 22 | .028 |
| 10 | .134 | 23 | .025 |
| 11 | .120 | 24 | .022 |
| 12 | .109 | 25 | .020 |

**TO PARTIES SENDING SAWS FOR REPAIRS.**

We receive hundreds of Saws for repairs, and as it would be impossible to identify them without the NAME OF THE OWNER ON EACH, attention to this matter at the time of shipping will save annoyance and delay. Mail instructions of work to be done, and shipping directions for the return of the Saw when finished.

# SHINGLE SAWS.



LEFT HAND.

RIGHT HAND.

When ordering Shingle Saws give the following directions plainly: Diameter of Saw, in inches. Thickness or Gauge of Saw at Centre. Thickness or Gauge of Saw at Rim. Full sketch or pattern of holes, and sample of screw by which to drill and countersink Saw. If you have a flange send it to have holes drilled in Saw to fit flange. If you wish us to furnish the flange, send full and correct sketch of diameter, thickness, holes, etc. State whose make of machine the Saw is to run upon, number of teeth you wish in the Saw, and be sure to give flat or countersunk side and the direction in which the teeth run (see engraving above).

Particular attention is called to the importance of using screws that are suitable to the thickness of the Saws. We frequently receive screws as samples by which to drill and countersink that have heads entirely too large for the thickness of Saw, and which require the flange to be countersunk, thereby reducing the length of thread in flange, making it impossible to bind the Saw firmly to flange.

In no case should screw-heads be deeper than thickness of Saw. Thin Saws require smaller screw-heads than thick Saws.

## Warranted Extra Cast Steel Shingle Saws.

**Tapered and Patent Ground.**

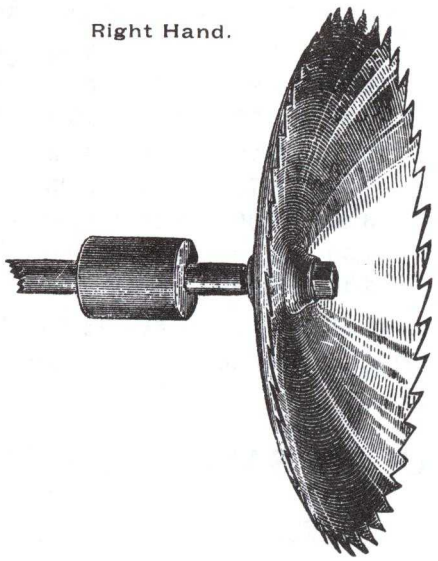
# RICHARDSONS' PATENT OIL TEMPERED AND PATENT GROUND CONCAVE SAWS.

Right Hand.



The attention of the manufacturers of chair or wheelwright lumber, barrels, etc., is respectfully called to Concave Saws, of which we are manufacturing large quantities. They are dished and tempered by an entirely new and patented process, and guaranteed to be of superior quality in every respect. We furnish these Saws considerably cheaper in consequence of our new mode of manufacture.

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|

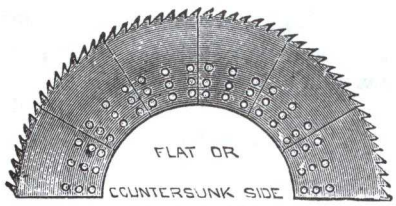
When the Saw is ground add to price for grinding the price of hammering, as in first column; when ground and gummed add to price of grinding the price of gumming and hammering, as in second column.

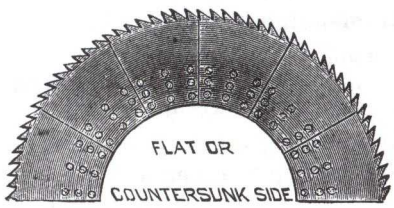
In sending us Saws to be repaired mark on them plainly who from, so they can be indentified on arrival.

## Veneering and Segar Box Saws in Segments.

**Patent Tempered and Patent Ground.**



LEFT HAND.



RIGHT HAND.

## Extra Cast Steel Re-Slitting and Slabbing Saws in Segments.

**Patent Tempered and Patent Ground.**

In ordering new plates, re-sawing, state the maker's name on machine, the number of plates in the saw, also diameter of saw when new, also the gauge or thickness you want plates ground to at tooth. We have all sizes of patterns for the different makes of machines, but it is well to send an old plate if you have one.

When ordering Segments give gauge or thickness at butt, gauge or thickness at edge, depth of bevel, diameter of Saw that Segments are to form, number of Segments in Saw, depth of Segments, number of teeth in each Segment, sample of screw by which to drill and countersink flat or countersunk side, and direction in which teeth run (see engraving).

In ordering for a flange that has been drilled send a sheet iron or tin templet, or a correct tracing showing holes and other particulars, or one of the old Segments, giving the depth they originally were.

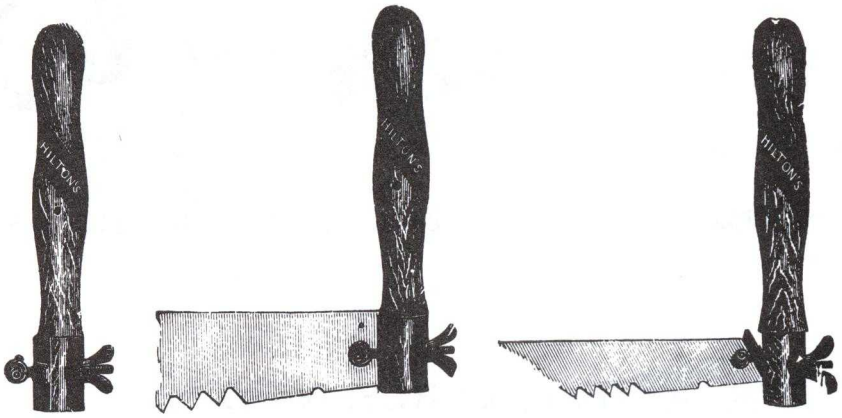
Plain Tuttle and Tenon Tooth same price as Champion.

RICHARDSON BROTHERS'

## Patent Adjustable Cross-Cut Saw Handles.



**Proof that this Handle is Superior to any Handle Made.**

1st.—That it is the only Cross-Cut Handle whereby the Saw can be turned from a Cross-Cut into an Ice Saw.

2d.—That a child can adjust it.

3d.—That it can also be used as a One Man Saw.

4th.—That it can be adjusted or used on any Cross-Cut Saw made.

5th.—That for strength it is equaled by none.

6th.—That for durability it is so simple in construction that there is nothing to get out of order, as is the case with most Cross-Cut Saw Handles heretofore made.

7th.—That every lumberman should have one of these Handles, as they can save time and labor.

8th.—That the cost of this Handle is no higher than any patent Handle now being used.

9th.—Therefore, try and be convinced that this is the only correct cheap time and labor-saving Cross Cut Adjustable Saw Handle made.

Price, per Pair, 45 cents, Net.

REGULAR **Cross-Cut** **Saw Handle.**

Plain, 10 cents per Pair.

## Loop Cross-Cut Saw Handles.

# RICHARDSON BROS., R 8 STRAIGHT BACK.

## Warranted Spring Steel, Patent Ground and Tempered.

### HAND, PANEL AND RIP SAWS.

**Our R 8 Hand Saw,** with Applewood Handle, combines the best and most practical improvements yet offered on Saws. We claim the following advantages: In carrying the Handle of the Saw forward on the Blade we bring the user nearer his work, and the weight of the Saw is brought nearer the wrist. This makes the Saw hang light in the hand, and avoids entirely the "heavy-at-point" feeling, so much complained of among carpenters. The shape of this Handle, together with the additional fifth rivet, makes it strong where other Handles break the most.

### RIP.

# RICHARDSON BROS., R 8 HOLLOW BACK.

## Warranted Spring Steel, Patent Ground and Tempered.

## HAND, PANEL AND RIP SAWS.

**Our R 8 Hollow Back Saw,** with Applewood Handle, combines the best and most practical improvements yet offered on Saws. We claim the following advantages: In carrying the Handle of the Saw forward on the Blade we bring the user nearer his work, and the weight of the Saw is brought nearer the wrist. This makes the Saw hang light in the hand, and avoids entirely the "heavy-at-point" feeling, so much complained of among carpenters. The shape of this Handle, together with the additional fifth rivet, makes it strong where other Handles break the most.

### RIP.

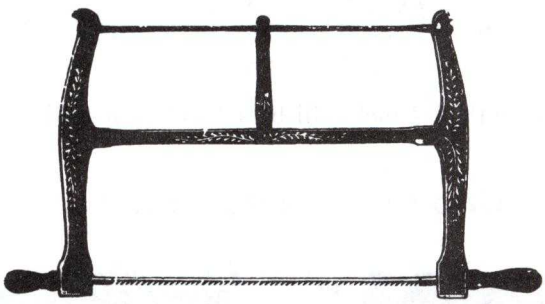
# TURNING SAWS AND FRAMES.

These articles are too well known to the trade to need any special remarks ; suffice it to say that they are not equaled. Their great point of superiority lies in the method by which the brass spindles are fitted to the handles, combining great strength and durability. The stretchers are carefully fitted to the sides, and the frames are nicely finished.



| Length, inches, | 10 | 12 | 14 | 16 | 18 | 20 | 22 | 24 | 26 | 28 | 30 |

When ordering state whether to be set, sharpened and joined. Toothed blanks are same price as finished Saws. Band Saw Blanks, either bright or black, furnished to order, but are not warranted.

### Suggestions on the Use of Band Saws.

Keep the correct pitch upon the Tooth, so as to give the Saw a proper lead into the cut. This will take the friction entirely off the stay-pin. By the use of a round-edged file (made by us) the Saw will be kept from galling and breaking. To save trouble and expense a proper pitch must be held for each kind of work and wood.

**Band Saws of any Width, Length and Tooth, Set, Sharpened and Joined Complete.**

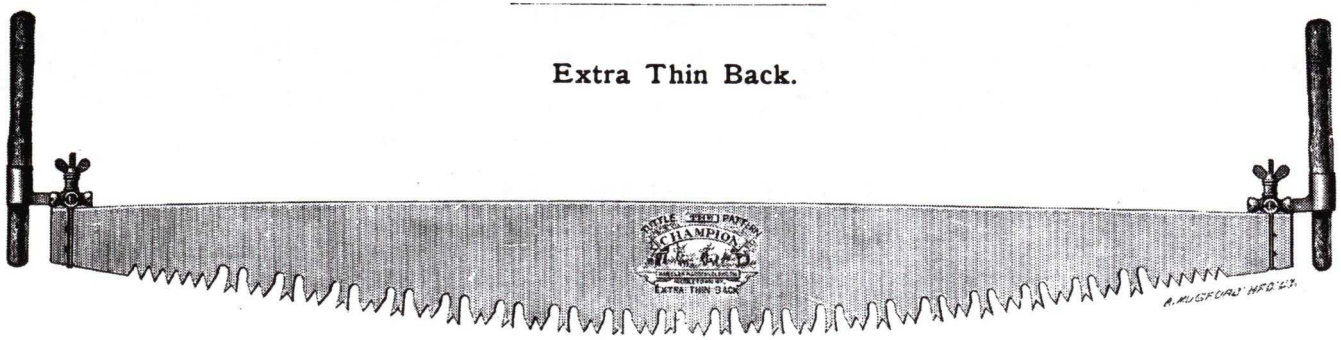
## THE "CHAMPION" SAW STANDS WITHOUT A RIVAL.

**Extra Thin Back.**



The word "CHAMPION" as applied to Saws is our exclusive trade mark, being registered Sept. 24th, 1874, and same must not be used on Saws, or the wrappers or packages in which Saws are sold, which are not our make. Our rights to the sole use of this trade mark have been fully sustained by a decision of the United States Supreme Court, and we must caution the trade against buying imitations of this Saw, stamped or etched the "CHAMPION," as all such are infringements of our trade mark. We will be obliged to protect by all legal means the reputation for quality on this brand which we have been so long in building up to its present standing. We have spent many years and a large amount of capital in inventing and making new machinery and improved methods, by means of which this Saw has been brought to the high position it now holds as the leading Cross-Cut in all sections, there being more Champion Tooth Saws sold every year than all other kinds of Cross-Cuts combined. No hardware stock is complete without a full line of these Saws.

# CROSS-CUT SAWS.

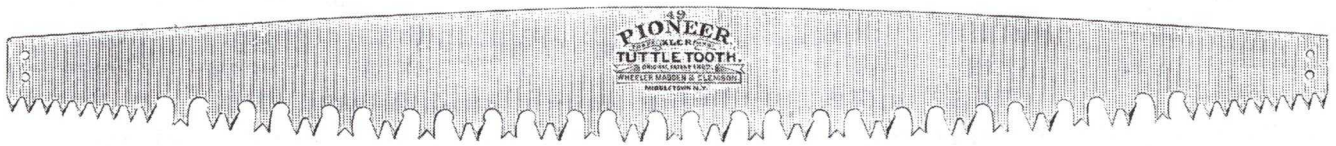
## PIONEER TUTTLE TOOTH.



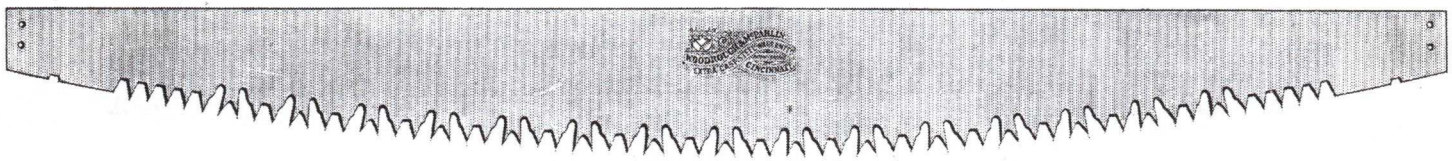
Extra Thin Back, 5 Gauges Thinner on Back than on Tooth.

| 4 ft. | 4½ ft. | 5 ft. | 5½ ft. | 6 ft. | 6½ ft. | 7 ft. | 7½ ft. | 8 ft. |
|---|---|---|---|---|---|---|---|---|
| $4.00 | $4.50 | $5.00 | $5.50 | $6.00 | $6.50 | $7.00 | $7.50 | $8.00 each. |

The thickness on tooth and back of this Saw varies according to the length of blade, being heavier in the longer plates to give it the requisite stiffness to stand up to its work in the heavy timber of the Pacific coast, where it is very largely used, and it is particularly adapted to that class of work. With our many years' experience and knowledge of what is required for this region, we believe these Saws, as now made, answer the purpose much better than any others offered.

# CROSS-CUT SAWS.

## ELECTRIC TOOTH.



Extra Thin Back, 14 Gauge on Tooth, 18 Gauge on Back.

| 4 ft. | 4½ ft. | 5 ft. | 5½ ft. | 6 ft. | 6½ ft. | 7 ft. | 7½ ft. | 8 ft. |

The above Saws, in Razor Steel grade, are of an even gauge from end to end, both on Tooth and Back, and being ground a true taper throughout from Tooth to Back will retain their even gauge as the Saw wears down—a very important feature. They are made from the very best of Crucible Steel, have an Extra High and Uniform Temper, are Set and Sharpened ready for use, and are thoroughly extra grade goods in every respect.

All Razor Steel Saws are wrapped in paper and have a wooden strip to protect the teeth, so they can be shipped separately.

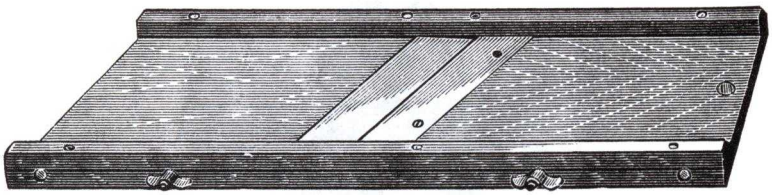
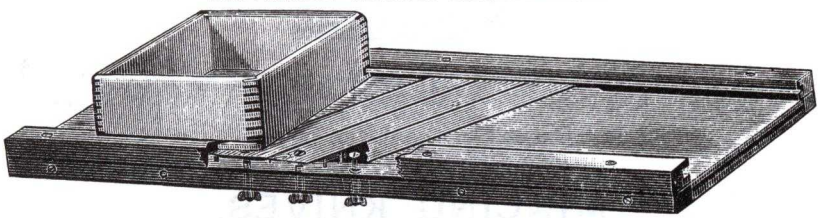
## No. 2. Slaw Cutter. Two Knives.



Per dozen..... $5.50

## Patent Adjustable Knife Kraut Cutter.

MOVABLE KNIFE APPLIANCE.



Patented Sept. 6, 1887.

### DIRECTIONS FOR USE.

This device may be adjusted to cut fine or coarse, as desired. For cutting Slaw the finest cut is usually the most desirable. To make the finest cut, the Wire Regulators are adjusted in line with the Cutter, or, in other words, these wires are placed directly against the back edge of the Cutters. To make the coarsest cut, the Regulators are turned until the leg comes against the side strip. If a medium cut is desired, the Regulators are turned half way around; thus the desired cut may be obtained by the position of the Regulators. To change the position of the Regulators, the bolts passing through the blades are first loosened, the Regulators turned to the desired position, and the bolts again tightened. To sharpen the blades, take out the retaining bolts, when the blades may be removed; after sharpening, the bolts are replaced, the Regulators adjusted to the desired cut, and the bolts tightened.

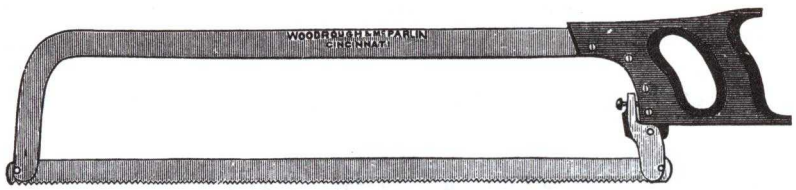
# Woodrough & McParlin's Celebrated Steel Back Butcher Bow Saws.

## No. 7.



Patented May 9, 1882.

This Saw supplies a want long felt by butchers—a Saw from which the blade can be readily removed or attached. No skill is necessary to insert or remove the blade; there is no clumsy buckle at the heel of the Saw to gather the meat, and altogether it is the best Saw for butchers' use offered to the trade.

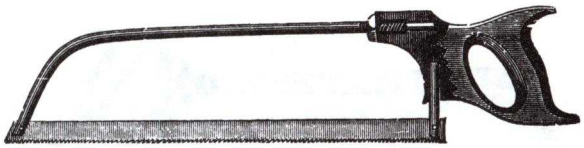
# Woodrough & McParlin's Kitchen Saws and Knives.



Patented January 17, 1882.

A Saw from which the blade can be easily removed or attached, and the tension regulated by means of a tightening nut, an advantage possessed by no other cheap Kitchen Saw in the market. The above cut represents the manner in which the handle is attached to the frame.

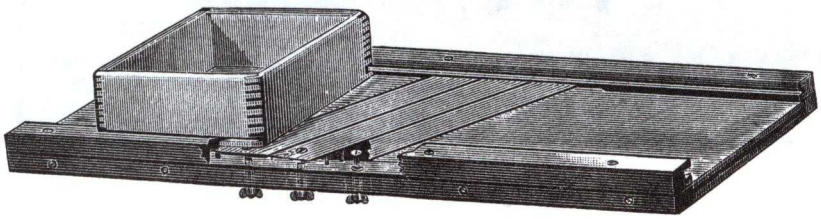
Per doz ..... $5.50

# Woodrough & McParlin's Patent Kraut Cutter.

## Movable Knife Appliance.

Patented September 6, 1887.



DIRECTIONS FOR USE.

This device may be adjusted to cut fine or coarse by loosening the thumb screws underneath, turning the wire regulators to the desired position, and again tightening the screws. To make the coarsest cut, the legs of the regulators are turned against the wooden side strips. To make the finest (the most desirable for slaw), the legs of the regulators are turned against the back edge of the cutters. An intermediate cut is made by adjusting the regulators at points between the backs of the blades and the side strips. To sharpen the blades, remove one of the top strips and take out the thumb screws on that side, when the blades may be removed.

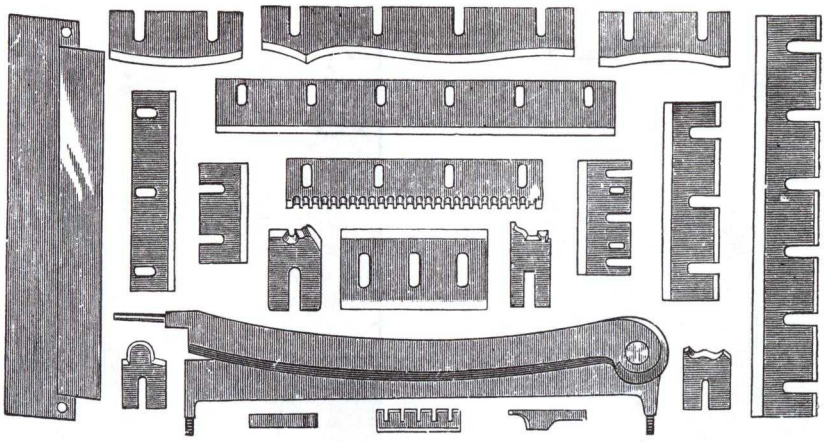
# MACHINE KNIVES.



## PLANER KNIVES, 6 to 31 Inches Long.

| | |
|---|---|
| 4 inches or less wide, $\frac{3}{8}$ or less thick | 12 cents per inch. |
| Knives $\frac{7}{16}$ inch thick | 10 per cent. advance. |
| Knives $\frac{1}{2}$ inch thick | 15 " " |

## KNIVES 6 Inches Long or Less.

| | |
|---|---|
| 2 inches long or less, 6 inches wide or less | 50 cents each. |
| Over 2 to 4 inches long, 6 inches wide or less | 62 " " |
| Over 4 to 6 " 6 " " " | 75 " " |

DIRECTIONS FOR ORDERING PLANER KNIVES.—Place the Knife face down upon paper, mark around to give the length and *position of slots*, then turn the knife on the end and mark around to give the thickness and bevel. Give the dimensions on the pattern thus: 2 knives, 24x3½x⅜.

| | |
|---|---|
| All Moulding Cutters, with edge worked to pattern | 40 cents per inch. |
| Moulding Cutter Blanks (not tempered) $1\frac{3}{4}$ in. long or less. | 25 " each. |
| Over $1\frac{3}{4}$ in. long | 20 " per inch. |

## Stave Knives, Mitre Knives, Spoke Knives, Paper Knives, Chopping Knives, Shingle Knives.

Prices on application.

Parties ordering Knives should send us a pattern, showing the bevel side, giving the exact length, distances between slots, what temper is required (whether hard, medium or soft), and number of Knives in a set, so that they can be properly balanced. These patterns we preserve for future orders. We guarantee all knives to balance.

## DIAMOND TOOTH.

| $4.00 | $4.50 | $5.00 | $5.50 | $6.00 | $6.50 | $7.00 | $7.50 | $8.00 each. |

These Saws are ground by improved machinery, by which the Saw receives a uniform taper from tooth to back, making it 4 and 5 gauges thinner on back than on tooth. The very best crucible steel that can be made is used in these Saws. Each Saw is set and sharpened ready for use. These Saws are papered and guarded so that they can be shipped separately.

## HOLLOW BACK OR NARROW CROSS-CUT SAWS, WITHOUT HANDLES.

| | 4 ft. | 4½ ft. | 5 ft. | 5½ ft. | 6 ft. | 6½ ft. | 7 ft. | 7½ ft. | 8 ft. |
|---|---|---|---|---|---|---|---|---|---|
| Champion Tooth..... | $1.44 | $1.62 | $1.80 | $1.98 | $2.16 | $2.34 | $2.52 | $2.70 | $2.88 each. |
| Diamond and Special Teeth. | $1.52 | $1.71 | $1.90 | $2.09 | $2.28 | $2.47 | $2.66 | $2.85 | $3.04 each. |

## CELEBRATED GIANT TREE SAWS.

Without Handles.

PATENTED MAY 18, 1880.

| 4 ft. | 4½ ft. | 5 ft. | 5½ ft. | 6 ft. | 6½ ft. | 7 ft. | 7½ ft. | 8 ft. |

# Peace's Celebrated Perfection Saws.

## P70, P68, P47, P37, P26, P24, P27.

In offering to the favorable consideration of the Trade our new line of Hand, Panel and Rip Saws, as shown on these pages, we would say they have for some time been quietly but largely introduced to the mechanics of this country, and the universal opinion has been given that they are the most complete Saws ever made. The many points of excellence they possess can be seen at a glance, and are the result of much careful study and expense, combined with the life experience of Mr. Harvey W. Peace as a Saw manufacturer, whose name, appearing on all our warranted Saws, is sufficient guarantee for maintenance of the high standard for quality which these Saws have obtained among mechanics as the *Best Saws in all respects yet produced*, and are fast superseding the old style.

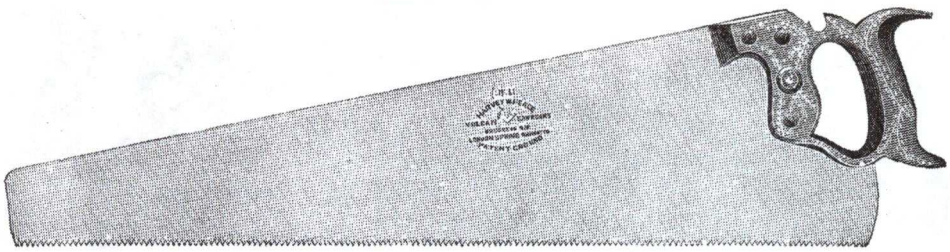
In these Saws, Nos. P70, P68, P47, P37, P26, P24, P27, the user is brought nearer his work, and the weight of the Saw is brought nearer the wrist of the operator, avoiding entirely the "heavy at the point" feeling, which all other styles possess, and giving complete control of the Saw. In carrying the handle of the Saw forward onto the Blade we not only stiffen the Blade, and *avoid weakening the handle* by splitting it nearly in two as in some other styles, but add to its strength by a nickel plated re-inforce plate, which is applied to the weakest part of the handle, thus stiffening the heel of the blade and strengthening the handle. This improvement was patented July 3d, 1883.

The Saws Nos. P70 and P68, have in addition to the above improvements, the hand-piece of the handle so shaped as to fit the hand better than the usual shape, and to avoid cramping the fingers. This improvement is much liked by mechanics, and was patented July 17th, 1883.

# HARVEY W. PEACE

## Extra Refined London Spring Steel, Patent Ground and Tempered, HAND, PANEL AND RIP SAWS.

### No. P70. RIP.



Patented July 3d, 1883, and July 17th, 1883.

Extra Refined London Spring Steel, *Highly Polished Blade*, Carved and Full Polished Apple Handle, Patent Shaped Hand-piece, four Brass Improved Screws, one Embossed; Nickel Plated Re-inforce Plate; Taper Ground, Thin Back; Warranted. *Without exception the Finest Saw Manufactured.*

28 inches, per dozen..... $38.00
30 " " ..... 43.00

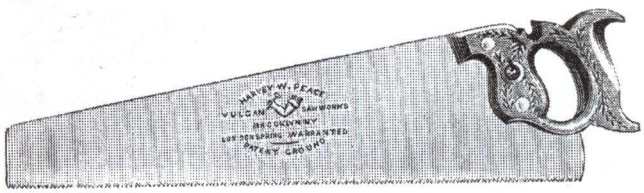
### No. P70. HAND.

Patented July 3d, 1883, and July 17th, 1883.

Extra Refined London Spring Steel, *Highly Polished Blade*, Carved and Full Polished Apple Handle, Patent Shaped Hand-piece, four Brass Improved Screws, one Embossed; Nickel Plated Re-inforce Plate; Taper Ground, Thin Back; Warranted. *Without exception the Finest Saw Manufactured.*

26 inches, per dozen..... $33.00

### No. P70. PANEL.



Patented July 3d, 1883, and July 17th, 1883.

Extra Refined London Spring Steel, *Highly Polished Blade*, Carved and Full Polished Apple Handle, Patent Shaped Hand-piece, four Brass Improved Screws, one Embossed; Nickel Plated Re-inforce Plate; Taper Ground, Thin Back; Warranted. *Without exception the Finest Saw Manufactured.*

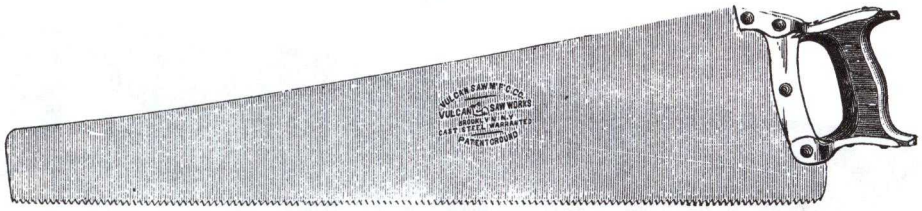
### VULCAN No. 15.



[Patent No. 311,437, January 27th, 1885.

In offering to the favorable consideration of the public our most recent improvement in Hand Saws we desire to call their attention to its novel and characteristic features. The handle is made of Bronze Metal; it possesses increased strength over the ordinary wooden handle now in use; it is adjusted to the blade in such a manner that greater length of stroke is obtained, while at the same time the operator is brought nearer to the work in hand, as in our P47 Saws, which have been so favorably received.
